

Question 5

I've learned a considerable amount about the process of analysis and design throughout the semester. I believe one of the most critical things I have learned is the importance of planning. All of the diagrams that we were required to do are very useful when it comes to actually implementing the system. Seeing how all of the pieces connect makes starting your implementation considerably easier. I also learned that sometimes you need to stray away from your original plan. Often times something won't work quite the way you thought it would or you will find some way to implement a feature that you hadn't thought of before. During implementation, analysis is key in identifying what is working well and what needs to change in order for the system to work as intended.
